of Correction

Transmittal for Certificate of Correction under 37 CFR §1.322

Sir/Madame:

The above-identified patent (hereinafter, the '660 patent) includes a
mistake that was generated by the Patent and Trademark Office, and the above-
identified Assignee seeks to have this mistake corrected under 35 USC §254 and
37 CFR §1.322 via the Certificate of Correction included herewith.

Nature of the mistake

The mistake is in the last line of claim 1, which is col. 19, line 5 of the '660 patent. The latest revision to the claims prior to issuance of the '660 patent was made in applicant's "RCE Preliminary Amendment and Response to Examiner's Final Rejection." The amended claim 28 from this Amendment is reproduced below.

28. (currently amended) A method of thermally processing one or more regions of a substrate, comprising the steps of:
- a. generating a continuous beam of radiation having a wavelength capable of heating the one or more regions to form an image having an operationally useful portion with ~~a substantially uniform an~~ intensity uniformity of about $\pm 2\%$; and
 - b. scanning the beam of radiation over the one or more regions in a scan direction so that each point in the one or more regions receives an amount of thermal energy effective to process each of the one or more regions at a ~~substantially uniform~~ temperature having a temperature uniformity produced as a result of the $\pm 2\%$ intensity uniformity.

It can be seen that amended claim 28 (which was renumbered as claim 1 in the '660 patent) includes in the last line the limitation of $\pm 2\%$ and not $\pm 20\%$, as was subsequently published in error in the '660 patent, as is seen in claim 1 of the '660 patent as reproduced below:

US 7,157,0

19

described herein. Accordingly, other embodiments are within the scope of the appended claims.

What is claimed is:

1. A method of thermally processing one or more regions of a substrate, comprising the steps of: 5 i:
 - a. generating a continuous beam of radiation having a wavelength capable of heating the one or more regions to form an image having an operationally useful portion with an intensity uniformity of about $\pm 2\%$; and
 - b. scanning the beam of radiation over the one or more 10 regions in a scan direction so that each point in the one or more regions receives an amount of thermal energy effective to process each of the one or more regions at a temperature having a temperature uniformity produced as a result of the $\pm 20\%$ intensity uniformity. 15

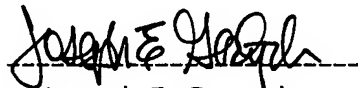

This is an error of consequence because it relates to the breadth and definiteness of the claim. It is therefore respectfully requested that the attached Certificate of Correction be issued so that the claim reads in a self-consistent and definite manner as intended by the Assignee during the prosecution of the '660 patent.

Power of Attorney

A Power of Attorney document (form PTO/SB/81A) and a form 37 CFR 3.73(b) are included herewith that provide the undersigned attorney with the authority to submit the attached Certificate of Correction on behalf of the above-identified Assignee. Correspondence relating to this matter should be directed to the undersigned attorney (Customer No. 53590).

Respectfully submitted on behalf of Ultratech, Inc. by:
